EXECUTIVE SUMMARY

Data Scientist and Machine Learning Engineer with 4 years of experience building predictive models, NLP pipelines, and computer vision systems.

TECHNICAL PROFICIENCIES

Machine Learning & AI: Deep Learning, NLP, Computer Vision, Transformers, LLMs, Scikit-learn

Languages: Python, R, C++, SQL, Bash

Frameworks & Libraries: PyTorch, TensorFlow, Keras, Pandas, NumPy, SciPy, OpenCV, Hugging Face, spaCy

Databases & Big Data: Apache Spark, Hadoop, PostgreSQL, MongoDB, Snowflake, BigQuery

Tools & Cloud: Docker, Git, MLflow, AWS S3, AWS SageMaker, GCP Vertex AI

WORK EXPERIENCE

Machine Learning Engineer at BioInformatics AI Labs (Aug 2021 - Present)

- Developed Transformer-based NLP models to extract clinical insights from 2M+ medical records using PyTorch and Hugging Face.
- Built automated feature engineering pipelines in Apache Spark and Pandas, speeding up model training cycles by 35%.
- Deployed real-time inference microservices with FastAPI and Docker on AWS SageMaker with 99.9% uptime.

Data Science Intern at Cambridge Analytics (Jan 2021 - Jul 2021)

- Trained computer vision classification models with OpenCV and TensorFlow, achieving 94.2% top-1 accuracy.
- Conducted exploratory data analysis and visualized churn dynamics with Seaborn and Matplotlib.

EDUCATION

Ph.D. in Computer Science (Specialization in Machine Learning)

Massachusetts Institute of Technology (MIT) (2017 - 2021)

Bachelor of Science in Mathematics and Statistics

Carnegie Mellon University (2013 - 2017)

PROJECTS

NeuroVision: Brain Tumor Segmentation

- Implemented 3D U-Net convolutional neural network in PyTorch for MRI volumetric segmentation.
- GitHub: <https://github.com/marcusvance-ai/neuro-vision>

ACHIEVEMENTS

- Published 3 first-author papers at NeurIPS and CVPR workshops.
- 1st Place Winner - Kaggle Medical Imaging Classification Challenge (2022).
